Site Location	Facebook Rathbone Square

Result of Test was	POSITIVE
Name of Tester	Amel Warsame
Designation	Covid-19 Response Technician
Signature	Amel Warsame

Positive COVID-19 Test Next Steps

Directions

- If you are onsite at a Facebook site when you receive your results, please leave immediately.
- If you are a Facebook employee, follow the normal procedure and immediately notify your manager that you will not be on-site today. You should not share any specific health information.
- If you are a contingent worker, immediately notify your employer and Facebook assignment manager that you will not be on-site today. You will discuss next steps with your employer.
- Contact your doctor to discuss your treatment plan. Your provider will decide if you need a secondary test. Please follow the instructions outlined on the People Portal (fburl.com/COVIDGuidance) and in the IDC case response guide listed on the IDC COVID wiki. **If onsite, leave the office immediately.**
 - Fill out the form at fburl.com/COVID19positive so our teams can initiate the necessary COVID-19 response. Provide the following information:
 - The date of your symptom(s) onset (if applicable)
 - The date you took your COVID-19 test
 - The last date you were onsite at any Facebook office
 - Any direct or close contact (within 6ft/2m for 15 mins or more, even with a mask) with Facebook workers or non-Facebook workers (for example, clients) while at work and/or conducting work on behalf of Facebook

When to Return to Your Site

- You should not come on-site until it has been 14 days from the date of your positive test result, and, if you have symptoms, until you are fever and symptom free without medication for 72 hours (or longer as advised by a health professional or government authority).
- In the 90 days after infection, you may still show up as positive on a test. We ask that you not test in those 90 days. Research shows that COVID-19 reinfection appears to be uncommon during the 90-day period after symptom onset. After this 90-day period, you can resume COVID-19 testing by participating in the Facebook Testing Program.

Negative Certificate:

Please note a negative test result in an a-symptomatic person does not rule out the possibility of infection, that they are incubating infection or the possibility that they have been exposed to the infection after the test was taken. Therefore, individuals should continue to follow risk mitigation measures including face coverings, clean your hands and surfaces regularly, 2 metre physical distancing, self-isolation and booking of a test in the event that you develop COVID-19 suggestive symptoms.
